To raise awareness about increasing incidences of fatty liver, city-based Ruby Hall Clinic along with Zydus joined hands to observe the Global

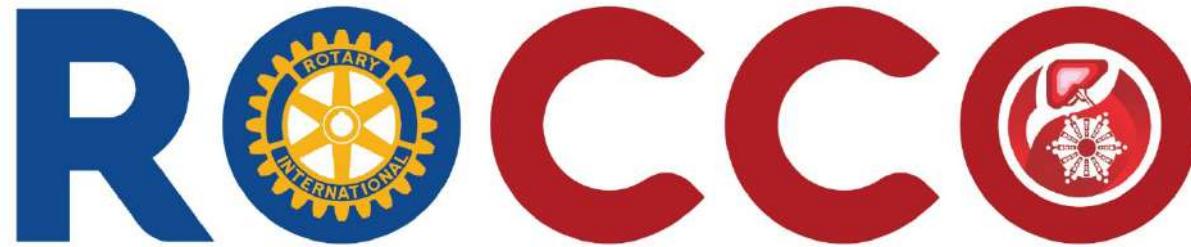

Fatty Liver Day on Thursday. Fatty liver disease basically takes place because of excessive fat accumulation in the liver and is increasingly becoming common in the country. It is noticed that the condition often goes unnoticed in its early stages due to the absence of noticeable symptoms. If left untreated, it can lead to more severe health issues, including cirrhosis and liver cancer. Recent studies indicate that the prevalence of fatty liver disease in India

For this, the hospital will be using FibroScan machine, and on this, Dr Nitin Pai, consultant and head of gastroenterology and GI endoscopy at Ruby Hall Clinic, said, "The increasing prevalence of fatty liver disease in India is a major health concern. Early detection is crucial to prevent the progression of this condition to more
